

# The Life Prize for Tuberculosis

## (formally the 3P Project)

TRANSFORMATIONAL  
INVESTMENT  
CAPACITY

### Project Summary

#### Problem

Address the deadly impact of tuberculosis (TB), including its lengthy, toxic and expensive treatments, and drug-resistant forms.

#### Proposed Solution

Transform Research and Development (R&D) for TB treatments with an innovative financing mechanism and enabling framework to incentivise and reward the development of new TB regimens ensuring the cost of R&D is covered and resulting treatments are available and affordable for all.

#### Potential Impact

- Transform the model for needs-driven R&D
- Deliver an affordable, short-course treatment regimen effective against all forms of tuberculosis
- Share Data and IP for 3 to 5 new compounds within five years of project launch

#### Viability

- Leverages MSF, Access Campaign and partners in a collaborative approach

#### Risk Mitigation

- Project establishes criteria for each phase, reducing scientific and financial risk

#### Scalability

- Develops a best practice model for adoption by broader global R&D

**Area/Type:** Medical Research and Development; Large Scale

**Sponsor/Support:** OC Amsterdam / Access Campaign

**Length/Project Status:** 4 years (of 10); **CLOSED** Page 1
