

# Migration History Tool

## Problem

Official detailed information on migrants' health is lacking and traditional questionnaires have proven to be insufficient in gathering data on migratory experiences.

## Proposed Solution

Design a mobile tool that can help correlate migratory trajectories with medical conditions and points of vulnerability for migrant populations to support operational decision-making and advocacy for MSF programs.

## Potential Impact

- Enables MSF to reorient project objectives by identifying unaddressed health needs
- Suggestion of new attention points at specific points of the route; refinement of community engagement and advocacy strategies through more detailed information

## Viability

- Use of **user design process**
- Engagement with Medical Department in OCB and OCBA

## Risk Mitigation

- Vendor chosen uses **agile methodologies to develop the tool**
- Conducting a pilot implementation and maintaining a formal link with developers for further modification

## Scalability

- Tool will be available for tablets, smartphones and computers
- Tool is flexible and questions can be modified based on each context

**Area/Type:** Operations Improvement and Technology; Incubator

**Sponsor/Support:** MSF Brazil

**Length/Project Status:** 8 months; **ONGOING**
