Project Summary

Problem

Local community engagement and leadership is critical, particularly among marginalised groups. Yet community efforts often collapse or are reduced when MSF exits a project.

Proposed Solution

Revolutionise MSF's approach to community-led initiatives by **ensuring capacity and sustainability** to carry on programming **after MSF exits a project**. **Test and learn exit strategy models** that better leave empowered local partners for continuity of care and community presence and activities in health care and advocacy.

Potential Impact

- Tests and learns **alternative models** for exiting MSF field projects
- Strengthens the **leadership of community and patient groups** to actively participate in the **decision making**

Viability

- Targets specific field projects scheduled for closure in Malawi, South Africa, Zimbabwe and Mozambique; Works with community based organisations and civil society

Risk Mitigation

- Close collaboration **with field operations**
- Engages **stakeholders** for input and buy-in

Scalability

- Linked with **patient-centred** approaches
- **Shares lessons learned** and **toolkits** across the movement; engages Ops Support Unit

Area/Type: Operations Improvements / Technology; Incubator

Sponsor/Support: MSF Southern Africa

Length/Project Status: 12 months; **ONGOING**
